## Lilitab Pro Line Floor Kiosk

The lilitab Floor Pro Line will change how you think about tablet kiosks. Its advanced functionality solves the power and maintenance problems of deploying public-facing tablet kiosks.

### Pro flexibility.

– **Tablet friendly.** The Floor is able to support most 10" tablets on the market, including Apple iPad, the Microsoft Surface RT, Samsung Galaxy Tab, Google Nexus 10 and more.

– **MagDock.** The patented MagDock feature is in the top of the pole where the lilitab head is mounted. With a turn of a key, the head unit easily detaches for assisted selling, maintenance or access to the tablet. The pass through power automatically begins to charge the tablet when docked. Lock offers 100 different key codes. Units can be keyed alike or randomly assigned.

– **Experience zero downtime.** In public environments, stuff happens. Who wants to call and wait for a technician when it does? If your lilitab stops working, just turn the key to swap in a new head unit. Problem solved—no waiting, no technician necessary.

– **Head tilt.** The head unit can be tilted up and down +/- 22.5° (can be fixed in place at any angle).

– **Mega expandable.** With added expansion ports on the back of the head, you can easily add third party electronics, as well as various customizations such as exposing the rear facing camera on any tablet.

### lilitab thought of everything, Rentfusion thought some more...

– **Radio transparent.** There's no metal in the lilitab head unit. This means it won't interfere with your tablet's various signals (WiFi, 4G, and Bluetooth) ensuring that you get maximum range and data throughput.

– **Tablet safe.** Silicone pads inside the lilitab head unit cradle your tablet against bumps and knocks. This ensures your tablet is safe from damage if dropped.

– **Rock solid and anti-theft.** The lilitab head unit is manufactured from ABS, one of the strongest plastics available. This together with our patented perimeter latching system it ensures your tablet is safe inside. The pole is manufactured from powder-coated steel that is nearly impervious to chips and scratches. At the rear of its base, the Floor has a solid steel lock-point, so you can secure it with a Kensington lock. For more permanent installations, the pole mount can be bolted to the floor through mount points inside the tubular base, leaving nothing visible or accessible.

– **Convenient.** You never have to remove your tablet to recharge it. The tablet is charged via a pass-through port in the lilitab head unit and charges automatically when plugged in.

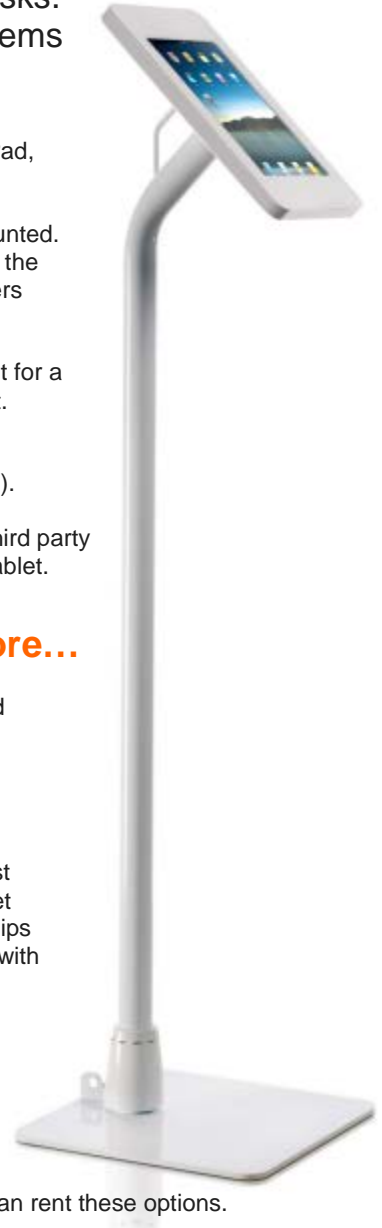

– **Base :** Rentfusion provides the Kiosk with the base plate as Standard included option.

– **Optional secure card reader.** Need a magnetic stripe reader? Rentfusion carries them and can rent these options.

– **Perfect for queuing systems.** lilitab Floor is the only iPad kiosk that integrates directly into your queuing system. Attach the optional belt barrier attachment, and you can position it to process orders and present information to your customers as they wait in line.

– **Face options.** The lilitab secure enclosure comes with your Home & Camera faceplate.

– **It likes to dress up.** Brand your lilitab your way with many options including custom faceplate design, backdrop graphic, banner, brochure pocket, keyboard, ID scanner, and lots more.
