SIGNVIDEO SV88 8x8 MATRIX VIDEO SWITCHER

Get Interconnected

Route up to eight inputs to any or all of eight outputs, using any or all of eight simultaneous signal paths. Using either model 8x8 audio-video routing switcher you can capture and edit video, for example, while at the same time running your duplication bay, while at the same time letting a client view a DVD...all running through the same video switcher at the same time. Route the audio to follow video or route video and audio independently. You can also hook up a [proc amp](#), standards converter or other throughput device and loop any signal through it (or bypass it) in an instant. At the touch of a button, the 8x8 audio-video routing switcher lets you electronically select and swap recorders, monitors and other devices at will, and include them in each of the setups.

True Audio & Video Matrix Switcher

As a true audio and video matrix switcher, the 8x8 is the electronic equivalent of a patch panel- you simply switch video signal paths at the press of a button instead of swapping all those patch panel cables. The 8x8 audio-video routing switcher lets you individually route any or all inputs to any output or outputs all at the same time. As a true audio and video matrix switcher you could also say it is like having several switchers all rolled into one.

Store and Retrieve Set Ups in the Blink of an Eye

You can even memorize up to eight of your most used configurations and recall them at the touch of a button. In the blink of an eye, your video and audio signals are re-deployed, instantly bringing up your duplication set up, your editing set up, or one of your other carefully planned configurations.

Swap Cables No More

Best of all, once you've hooked up all your cables to the 8x8 audio-video routing switcher, you can forget about them. No more cable swapping, and no more wear and tear on connectors from connecting and reconnecting.

Connect Anything, Go Anywhere with analog

Also by using common denominator analog connections the 8x8 audio-video routing switcher lets you interconnect just about anything. You can also use long cable runs, feed a monitor across the room...or interconnect the upstairs edit bay with the downstairs edit bay...things you can't do with ieee-1394 firewire (without super thick, expensive cables or patching in repeaters every few feet).

Specifications

Vertical Interval Switching: Yes
Video Bandwidth: 40 Mhz, 3200 lines of Resolution
Video S/N: 68 db+
Diff Gain: .06
Diff Phase: .15
Crosstalk Worst Case: 60db
Audio S/N: 100db
Freq Response: 5Hz to 3 Mhz
Power: 9 Volts AC, 1 Amp
Dimensions: 9.2" wide x 4.05" high x 6.45" deep
(3.71" high without feet)
23.37cm wide x 10.29cm high x 16.38 deep
(9.42cm high without feet)
